

Simplifying Guest Access Control with Two Technologies

Consolidate entry identification, verification, enrollment, and re-entry into a single, seamless ecosystem.

Two Technologies innovative XF rugged handheld Android™ device with:

- Seamless Age Verification
- Integrated Wristband Printing
- Near-Infrared (NIR) Palm Vein Scanning

Eliminates friction, saves money, and elevates the guest experience

Applications:

- Entertainment: Festivals, Fairs, Bars, Nightclubs, and Sporting Events
- Institutional: College, University, and Nonprofits Events
- Tourism: Theme Parks, Water Parks, and Guided Tours

Benefits:

1. Improved “Front Gate” and Other Friction Points

Whether it's a crowded nightclub, festival or event, the XF can improve friction points.

- **Minimize Fraud:** Replace easily forged stamps or visual markers with biometric security and visual wristbands
- **Revenue Loss:** Time spent by guests in line is a lost opportunity for concessions and engagement

- **Human Error:** Automated ID checking reduces the legal and reputational risk of underage drinking or unauthorized access
- **Mobility:** The all-in-one design allows you to deploy staff where they are needed most - eliminating stationary bottlenecks and providing “roaming” verification and printing

2. Seamless Age Verification

- Scan barcodes on driver licenses and passports to verify date of birth

3. Integrated Wristband Printing

The XF's direct thermal system produces 1" x 11" tamper-evident, waterproof Mylar® wristbands

- **High-Visibility Tiers:** Automated scaling of bold fonts ensures guest status (e.g., 21+, VIP, ALL ACCESS) is recognizable at a distance
- **Colored Wristbands:** Enables employees to easily identify age, access level, or VIP status
- **Dynamic Visual Security:** Supports high-contrast monochrome images and photos
- **Encrypted Data Linking:** Generates unique barcodes that store guest profiles, enable cashless payments, and enforce time-gated access

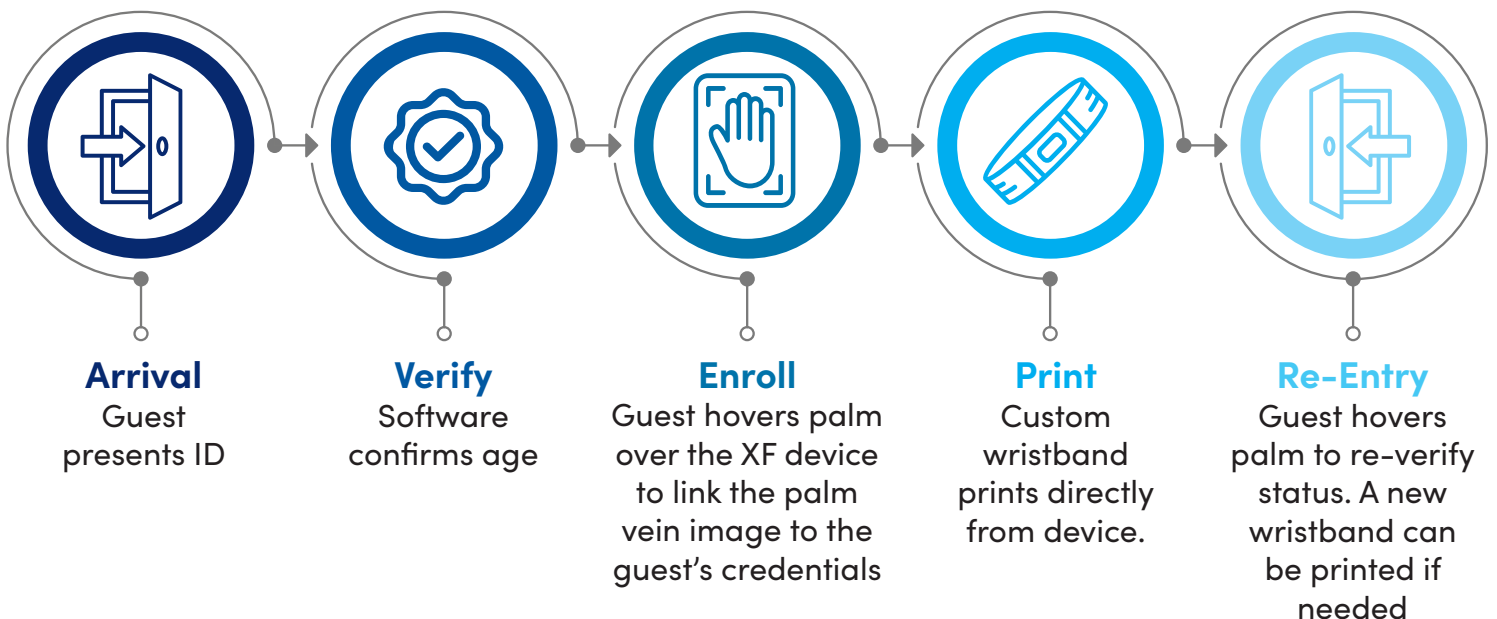

4. Near-Infrared (NIR) Palm Vein Scanning

Palm vein biometrics provide:

- **High Security:** Veins are internal and virtually impossible to fake
- **Total Hygiene:** A contactless “wave” of the hand is all it takes - no physical contact required
- **Universal Precision:** Equally accurate regardless of age, ethnicity, or gender
- **Use Cases:** Perfect for seamless re-entry, instant wristband replacement, recertification of age eligibility and “palm-to-pay” digital currency at concessions

The Operational Workflow:
